

THE LEADER IN CUSTOM CONTAINER HANDLING SOLUTIONS & ENHANCEMENTS

RXNT® - "RAPID EXCHANGE NO TOOLS" CHANGEPARTS

The RXNT® System is based upon the installation of Nucleus Components to any rotary machine in your packaging line. Satellite Components, container geometry driven, are readily affixed to the Nuclei in a matter of moments . . . without tools!

The Satellite Components, being much smaller than conventional changeparts are lighter, less expensive and easier to store. The standardization of changeover procedure for machines of every manufacture is a training miracle!

Features & Benefits

- CNC routed parts guarantee pocket to pocket consistency for perfect handling
- Reduces changeover time
- Reduces training costs
- Cost effective!

5 S Principles of Lean Manufacturing

Our RXNT® tooling conforms to the World Class Manufacturing of **5 S Principles** to simplify and optimize the entire changeover process.

- SORT**
 - Customized and clear engraving for easy identification of parts
 - Solid colour coding (available in 81 combinations) simplifies retrieval and offers instant product identification
- SIMPLIFY**
 - Nucleus components are only timed once and are easily removable when required
 - Guess work eliminated
 - No Tools required for changeover
 - Use of locating pins means one way fit
 - Most parts weigh less than 20 lbs.
 - Parts are puzzle cut for ease of installation and removal
- SHINE**
 - Easy removal for cleaning
 - Flat surfaces without hubs facilitate stacking and easy cleaning
- STANDARDIZE**
 - Each set is colour coded to allow for easy identification
 - Common changeover methodology regardless of OEM (Original Equipment Mfr)
- SUSTAIN**
 - RXNT® concept increases productivity and profitability by reducing production down time
 - In conjunction with our storage carts sustains organized and clean work environment
